With the evolution of the modern diet, it has become more and more difficult to consume the nutrients that we need to thrive. Our body is full of toxins and our digestion has been affected by an overabundance of processed foods and beverages. Our health is dependent not only on the nutrition that we consume overall, but also on the amount that our gut flora receives. This flora is comprised of many different microbes, each with its own unique environment, depending on what it is exposed to. Our flora is critical in strengthening our immune system, digesting foods efficiently, increasing nutrient absorption, maintaining a healthy weight, and obtaining increased energy levels.

Prebiotics are an important tool in helping regulate our body's flora. Supplementing a diet with prebiotics has been shown to increase the level of certain microbes, which in turn regulates metabolism and allows for better communication between different organs. The end result is enhanced system-wide health.
